

## **SPEAKER BIOGRAPHY**

### **Michael Brown, PE, LEED AP**

Mr. Brown serves as Market Leader and Project Manager for AEI's Process Engineering practice. He has over 20 years of engineering, operations, project management, and process design and development experience in the pharmaceutical, medical device and construction industries. Mr. Brown's expertise in large-scale manufacturing, product and process development, analytical chemistry and industrial microbiology is broad. His interest in sustainable design has been a great complement to various AEI projects, including the design of grey water systems, hog waste methane processing, and on-site sewage and water treatment. Mr. Brown is also the founder of Sustainable Biotech, an organization that considers trends and initiatives focused on renewable energy, the environmental impact of human activities, and sustainability in both the built environment and industrial processes.
